How does an item assigned a temporary shelf return to its permanent location if the item is never checked out?

Symptom
Library staff assigns an item to a temporary shelf with a fixed end date. If never checked out, the item remains assigned to the temporary shelf forever.

Applies to
- Wise staff client

Resolution
When checked-in, the item comes off the temporary shelf and is returned to a permanent shelving location. However, this can appear to not be the case if the library adds a comment to the item record and checks the "Show in location" box on the comment. Adding a comment and clicking "Show in location" makes the comment appear as the location for the item.
