How do I create a list of items linked by specific staff members?

Last updated: Wed, 08 Sep 2021 17:07:48 GMT

Applies to

- Wise configuration

Answer

This information can be gathered by running the following query in the Manager at systemWise > Reports > Report processor, on the Queries tab:

```sql
select
from exemlog2 e where soort='KOP'
and pid='10'
limit 999;
```

For this query, you will need to find the PID for the staff in question and substitute the number there. The PID can be found in the Manager, under systemWise > Access authorizations. Search for the staff person and use the Customer ID. You can use the exem_id (item id) from those results to look at the items via Items > Search.

If you want to use a query to identify the barcodes per item ID, that can be found in the exemplaren table. Replace the xxxxxx numbers with the exem_id numbers from the original query results.

```sql
select * from exemplaren e where exem_id in (xxxxx, xxxxx, xxxxx);
```
